Annual Review
2018

Trevo Retriever and Benjamin

Saving a life ... and a way of living.

Seventh-grader Benjamin Bubis was going to soccer practice, as usual. When he got in the car with his grandfather, Boris Hutorin, little did he know he would become a lifesaving hero 40 minutes later.

Boris, who is 71, suddenly stopped talking during the drive. When Benjamin realized something was wrong with his grandfather, he grabbed the steering wheel to avoid crashing and guided the car to the side of the highway to call 911.

“I started to scream and scream, and he didn’t respond at all,” Benjamin recalls. “I was scared, so I called my mom and she told me to call 911. I pressed all the buttons, and I’m not sure what stopped the car.”

“I lost everything. I couldn’t hear anything, and I could only see from the left side,” says Boris.

An ambulance arrived to take him to UMass Memorial Medical Center in Worcester, MA, where he was seen by Dr. Ajit Puri, an experienced neurointervention specialist who uses minimally invasive techniques to treat stroke, brain aneurysms and carotid stenosis.

“Boris had a massive stroke where the main artery of the brain, called the middle cerebral artery, was blocked by a big clot,” says

Dr. Puri. “We call that a large vessel occlusion. He could not move the entire right side of his body. He could not speak at all, and he was having a severe gaze preference,” which indicates eye movement limitation.

Boris’s best chance for recovery with a large vessel occlusion was to have the clot removed using a stent retriever, a minimally invasive procedure that is now the standard of care for large vessel blockages. Dr. Puri guided **Stryker’s Trevo Retriever** from Boris’s femoral artery in his leg up to the brain, where the retriever ensnared the clot. Dr. Puri was then able to remove the retriever with the clot back through a catheter.

With Dr. Puri’s extensive experience using the stent retriever, the procedure, from the time the catheter was inserted, only took 21 minutes to restore blood flow to the brain. As a result, Boris was soon able to move the right side of his body and his speech is now back to normal.

“I feel lucky, because if it weren’t for Ben, if I was alone in the car—I’m pretty sure I was going 65 miles an hour—I would crash somewhere,” says Boris.

Trevo Retriever: around the globe

— Training and education
— In the news

— Boris's story

Every second counts

Stroke is the fifth leading cause of death in the U.S. "Getting emergency help as soon as you recognize the signs of stroke for you or a loved one is critical," says Dr. Puri. In fact, patients can lose nearly two million brain neurons every minute until the clot is removed.

Boris was able to avoid long-term brain damage, thanks to Benjamin's actions and the quick response at the hospital, including the use of advanced treatments like the Trevo Retriever.

Until recently, the use of a stent retriever to remove a clot was limited to the first six hours after an ischemic stroke, which meant patients seeking help outside of this time window faced severe disability and even death. In early 2018 Stryker's Trevo Retriever became the first and only thrombectomy device to receive FDA clearance to significantly reduce disability in patients up to 24 hours from symptom onset. To learn more about the impact of these changes visit Stryker.com/Trevo24.

Boris Hutorin
and his grandson,
Benjamin

"Ben saved my life.
Dr. Puri saved my
way of living."

Dear shareholders,

Our momentum continues
as we delivered another
successful year in 2018!

Kevin A. Lobo

Chairman and Chief Executive Officer

We surpassed \$13 billion in sales for the first time, recorded our 39th consecutive year of sales growth, posted strong adjusted earnings, completed numerous acquisitions and garnered accolades as a great place to work.

Culture and leadership

Our mission—**Together with our customers, we are driven to make healthcare better**—is a unifying force in the company, as are our values: **Integrity, Accountability, People and Performance**. Our people are driven, team-oriented and humble. We continue to be seen as a great place to work (see page 12) and are honored to have received many international and diversity and inclusion recognitions.

Our leadership team (see page 16) has changed following the retirement of Lonny Carpenter and David Floyd, who both made significant contributions to our success. Tim Scannell was appointed President and Chief Operating Officer, and I look forward to his leadership in driving performance across our businesses and regions. We named two new commercial Group Presidents—Andy Pierce

(MedSurg) and Spencer Stiles (Neurotechnology, Instruments and Spine)—and, like Tim, both are longtime Stryker employees who have demonstrated excellent performance. Viju Menon also joined the company as Group President of Global Quality and Operations after a successful career in the technology industry. Howard Cox retired from our Board and was named Director Emeritus, while two new directors were added: Sheri McCoy and Rajeev Suri.

Financial performance

Our organic sales growth of 7.9 percent (which excludes the impact of acquisitions, foreign currency exchange and the adoption of Accounting Standards update ASC 606) was once again at the high end of the medical technology industry and marked our sixth consecutive year of accelerating organic growth. Our sales growth was well balanced across geographies, with strong performances in the United States, South Pacific, Japan, Europe, Latin America and emerging markets. In fact, our organic sales growth outside the United States was higher than our United States growth. Reported sales growth was 9.3 percent, including 1.9 percent growth

from acquisitions and increased unit volume partially offset by a 1.4 percent impact from lower prices.

We also continued to generate healthy operational cash flow that contributed to a year-end cash and marketable securities position of \$3.7 billion, enabling us to increase our dividend rate by 10.6 percent for the January 2019 payment. Our reported net earnings grew 248.3 percent, aided by the favorability of onetime tax events, and our adjusted net earnings grew by 12.7 percent.

Innovation

In 2018, our strong innovation pipeline helped power our growth, as we spent 6.3 percent of sales on research and development and launched many exciting products, such as the Neuroform Atlas Stent System in Neurovascular and the Trident II Acetabular System in Joint Replacement.

We continued to add innovations to our product and service portfolios through acquisitions (see pages 4–5), including the high-growth spinal implant company K2M. Our Instruments business added Entellus, which expands our Ear, Nose and Throat (ENT) offering, along with Invuity, which offers lighted retractors and advanced energy products. We also acquired HyperBranch, a dural sealant product that strengthens our Craniomaxillofacial (CMF) portfolio, and Hygia, to deepen our Sustainability Solutions business.

Cost transformation

Our multi-year effort to systematically reduce costs continues to progress. We were pleased to deliver 40 basis points of adjusted operating margin expansion in 2018 (excluding the impact of ASC 606), despite significant dilution from acquisitions. And we continue to make progress establishing shared services in Human Resources and Finance and implementing a single ERP system to support our commercial businesses and optimize our manufacturing and supply chain.

Looking ahead, we expect Stryker to continue to grow sales at the high end of the medical technology industry, while driving leveraged earnings. Our strategy, people and culture will enable us to maintain our strong performance in the years ahead.

I would like to thank our management teams, our Board of Directors, and our 36,000 employees worldwide who live our mission and values every day.

Kevin A. Lobo
Chairman and Chief Executive Officer

Mission

Together with our customers,
we are driven
to make healthcare better.

Values

Integrity

We do what's right

Accountability

We do what we say

People

We grow talent

Performance

We deliver

New acquisitions strengthen our future

Our disciplined approach to business development drives our growth and future innovation.

Mergers and acquisitions have long been a priority for our capital allocation and an accelerator of long-term performance. Our ability not only to acquire the right businesses but also to integrate them quickly to drive growth is a strength.

In 2018, we completed a series of acquisitions that will strengthen our core business and add complementary products where we already have a market presence.

▼ Hygia Health Services

With a focus on reprocessing patient-care single-use devices like ECG leads and infusor bags, Hygia will broaden the reprocessing capabilities of our Sustainability Solutions business. A premier provider of sustainability solutions in the global healthcare market, Hygia has helped several thousand single-use device reprocessing customers collectively save millions of dollars in supply costs and divert millions of pounds of waste from landfills.

▲ VEXIM

We acquired this French medical device company that specializes in the minimally invasive treatment of vertebral compression fractures. VEXIM's flagship product is the SpineJack system, a mechanical expandable vertebral compression fracture implant for fracture reduction and stabilization. VEXIM's portfolio is highly complementary to the Interventional Spine (IVS) business of our Instruments division.

K2M

K2M is a global leader of complex spine and minimally invasive products designed to achieve three-dimensional Total Body Balance. Spine surgeons use these technologies and techniques to treat some of the most complicated spinal pathologies. K2M's innovative product portfolio and robust pipeline strengthen our leadership in the spine and neurotechnology markets, while expanding our global footprint.

Entellus

This high-growth global medical technology company focuses on minimally invasive devices that enable physicians to conveniently and comfortably perform a broad range of Ear, Nose and Throat (ENT) procedures, including the treatment of nasal airway obstructions. As a leader in the ENT segment, Entellus brings a comprehensive portfolio of products that deliver superior patient and physician experiences.

HyperBranch

Supporting our growth strategy within our Neurotechnology business, HyperBranch develops and markets products for dural repair. The addition of its Adherus AutoSpray dural sealant to our cranial closure portfolio strengthens our position of excellence in the dural repair space.

Invuity

The leader in advanced photonics and single-use, lighted instruments delivers enhanced visualization for a wide variety of clinical applications, serving a number of segments, including orthopaedic and spine surgery, general surgery and women's health procedures. These innovative products, which are market leaders in illumination to help make surgery more precise, efficient and safe, are highly complementary to our Instruments business.

Making healthcare better, together with Mako

Mako Technology has evolved during its more than 13-year history. The year 2018 marked our five-year acquisition anniversary of MAKO Surgical Corp., and through the end of 2018 more than 200,000 Mako procedures have been performed in 26 countries across the globe.¹

Mako Robotic-Arm Assisted Surgery enables surgeons to have a more predictable surgical experience through three unique steps: CT based enhanced planning, dynamic joint balancing and haptic guidance.

In partial knee and total hip applications, Mako has been shown to facilitate more accurate positioning to plan^{2,3} and has

demonstrated enhanced patient-reported outcomes, like less pain than those undergoing manual surgery during the 90-day post-operative period for Mako Partial Knee, and significantly higher modified Harris Hip scores (92.1+/-10.5 vs. 86.1+/-16.2, p=0.002) for Mako Total Hip compared to manual surgery.^{4,5}

Mako Total Knee was evaluated in two distinct, prospective, consecutive series, single-surgeon studies comparing patients undergoing conventional jig-based total-knee replacement versus Mako Total Knee surgery (40 patients⁶ and 30 patients⁷ in each cohort).

The studies concluded that Mako Total Knee with Triathlon was associated with:

1. Stryker's sales/case data.
 2. Bell SW; Anthony I; Jones B; MacLean A; Rowe P; Blyth M. Improved accuracy of component positioning with robotic-assisted unicompartmental knee arthroplasty: data from a prospective, randomized controlled study. J Bone and Joint Surg. 2016;98: 627-35.
 3. Elson L, Douchis J, Illgen R, Marchand R, et al. Precision of acetabular cup placement in robotic integrated total hip arthroplasty. Hip Int 2015; 25(6): 531-536.
 4. Blyth MJ, Anthony I, Rowe P, Banger MS, MacLean A, Jones B. Robotic-arm assisted versus conventional unicompartmental knee arthroplasty: Exploratory secondary analysis of a randomized controlled trial. Bone and Joint Research. 2017 Nov 16 (11): 631.
 5. Bukowski BR, Chughtai M, Anderson P, et al. Improved functional outcomes with robotic compared with manual total hip arthroplasty. Surg Technol Int. 2016 Oct.
 6. Haddad FS, et al. Robotic-arm assisted total knee arthroplasty is associated with improved early functional recovery and reduced time to hospital discharge compared with conventional jig-based total knee arthroplasty. The Bone & Joint Journal, July 2018.
 7. Haddad FS, et al. Iatrogenic Bone and Soft Tissue Trauma in Robotic-Arm Assisted Total Knee Arthroplasty Compared With Conventional Jig-Based Total Knee Arthroplasty: A Prospective Cohort Study and Validation of a New Classification System. J Arthroplasty. 2018 Aug;33(8):2496-2501. Epub 2018 Mar 27.
 Professor Fares S. Haddad is a consultant of Stryker. However, Dr. Haddad and the authors of publications #6 and #7 did not receive financial or in-kind compensation for the research or publications.

New education centers— **building knowledge and experience**

With a strong commitment to education and training for healthcare providers—to make healthcare better for patients—we have recently opened three state-of-the-art education and training centers.

▲ **Amsterdam Skills Centre**

Amsterdam, The Netherlands

The Amsterdam Skills Centre (ASC), which opened its doors in February 2019, offers medical specialists and other healthcare professionals from all over the world an innovative learning environment. A collaboration of Amsterdam University's Academic Medical Center and Stryker, which invested in the building and equipment, the ASC features 12 high-tech operating rooms, operating robots, virtual reality simulators and educational facilities.

▲ **Asia Pacific Training Center**

Hong Kong, China

Our new Asia Pacific Training Center in Hong Kong will provide surgeons in the region with world-class training and simulated operations using the Mako Robotic-Arm Assisted system. The 6,000-square-foot space will also be a top venue for seminars, workshops and hands-on training in surgical education. Through the center, surgeons can strengthen their surgical competencies and share knowledge of the latest techniques in robotic surgery. More than 100 guests were on hand to celebrate the opening in October 2018.

▲ **Mako Education Center**

Ft. Lauderdale, Florida, U.S.

The Mako Education Center is a premier training facility for surgeons, with a primary focus on Mako Robotic-Arm Assisted Surgery training and education. The 45,000-square-foot training center features a custom wet lab that accommodates 12 Mako stations, reflecting the importance of cutting-edge technology in medical and surgical applications. Following the ribbon-cutting, our Chairman and CEO, Kevin Lobo, hosted a global town hall for Stryker's more than 200 team members in the area.

Driven to **innovate**

Customers and patients are at the heart of everything we do. We nurture innovation to address customer challenges.

That approach began with our founder, Dr. Homer Stryker, an orthopaedic surgeon in Kalamazoo, Michigan, who invented products in the local community hospital where he worked to better serve the needs of his patients.

This spirit of innovation continues to drive us today. We collaborate with hospitals and healthcare providers to make sure we understand their practice environment, treatment protocols and unmet needs.

Our deep understanding of our customers helps us design and manufacture products and services that make a difference for them.

We collaborate across the company and leverage our talented innovators to develop meaningful technology and solutions. And we recognize our best.

Our R&D Fellows Award recognizes significant accomplishments in research and development over

time, reflecting the importance of innovation and collaboration to help solve customer problems and develop products and services that advance our mission.

Nominated by their R&D leader and division president, Fellows have developed breakthrough technology and market-leading products that have influenced the direction of our business.

2018 R&D Fellow inductees

John Scanlan

Senior Director, Business and Process Development, Advanced Operations

Early in his career, John played a key role in developing and introducing many new knee, hip and bone cement products before leading teams in the development of our additive manufacturing technology. His work included technical and process design as well as the creation of a software and equipment supplier base for producing high-quality, innovative additive products. John's leadership resulted in the launch of our first additive implant, the Triathlon Tritanium Tibial Baseplate, in June 2013, and many others that followed.

Robert Cohen

VP, R&D, Chief Technology Officer, Joint Replacement

Robert's many contributions to the advancement of hip and knee products over the years are evident in the 28 patents for which he is responsible, including the tibial component delta fit keel design, which is integral to tibial component stability and initial fixation. Robert was also instrumental in transitioning Mako robotics from being a niche player in partial knee replacement to establishing a broad-based arthroplasty platform, while guiding the development process and regulatory strategy for Mako Total Knee.

Diversity and **inclusion**

We encourage, value and leverage the differences in people and perspectives to make healthcare better.

Inspiring women in STEM

We understand that the future of medical device innovation relies on exceptional talent in Science, Technology, Engineering and Math (STEM). That's why our Stryker's Women's Network (SWN) partnered with I WISH (Inspiring Women in STEM), an initiative to inspire and motivate young female students to pursue careers in STEM. I WISH encourages female role models to share their experiences, from school subject choices and college and career choices to day-to-day work as engineers.

The statistics tell the story: 58 percent of students earning a degree in the United States are women, but only 39 percent of students earning STEM degrees are women.

I WISH hosted a conference and interactive exhibitions in Cork and Dublin, Ireland, where a Stryker team met with 6,000 women to show them how we are driven to make healthcare better.

Our team members also spoke to the teachers in attendance about our graduate programs and the opportunities that are available

to students, including the Quality Graduate Rotational Program, the RISE Engineering Program, the Global Engineering Development Program and various internships.

We also had interactive, hands-on demonstrations of our products and technologies that improve and save lives, including defibrillators, endoscopes, cranial drills, biomaterials, stents, catheters, ultrasonics and robots, among others.

Employee resource groups (ERGs)

SWN enhances opportunities for members through networking, professional development, leadership messages, community outreach and educational projects that drive the attraction, development, engagement and retention of talented women.

The network is open to all employees, both men and women, and includes thousands of members across the globe.

Other Stryker ERGs include Stryker's Allies for Equality (SAFE), Women in Stryker's Engineering (WISE), Stryker's African American Network (SAAN), SOMOS (Hispanic/Latino), Stryker's Emerging Professionals (SEP) and Stryker's Veterans Association (SVA).

“Gender balance increases our ability to attract the best talent and make healthcare better for customers and patients.”

– Katherine Owen
Vice President, Strategy
and Investor Relations

We understand that attracting and empowering a diverse team is critical for our business and we take steps to ensure that we have a great workplace for everyone.

Our commitment to people and planet

As an industry leader, we believe corporate responsibility is a strategic priority, and we invest time and resources in the areas that are most important to our employees, customers and the communities where we live and work.

We accomplish this by focusing on five distinct areas:

Investing in people

Promoting health, safety,
talent and inclusion

Product lifecycle innovation

Carefully considering our
use of materials across a
product's lifecycle

Resource efficiency

Reducing water, waste
and emissions

Responsible supply chains

Managing and sourcing
with high standards

Ethics and accountability

Ensuring transparency,
honesty and fairness are
always paramount

Key initiatives in 2018

Below are a few highlights of our commitment to people and planet and our 2018 achievements, through our key focus areas.

With appreciation

We want to express our gratitude and appreciation to Lonny Carpenter, Group President and Advisor to the CEO, who is retiring from Stryker on March 31, 2019, and David Floyd, Group President and Advisor to the CEO, who will retire on June 30, 2019.

Lonny has had an amazing career and left a wonderful legacy in his 30 years with the company, playing major roles in helping us grow into the Fortune 250 Company that we are today. David has made significant contributions to the growth and success of the company since joining in 2012, including his role in spearheading numerous acquisitions, such as Mako Surgical and Small Bone Innovations.

Our best wishes to them both.

Lonny Carpenter
