IsoFlex SE™ and ComfortGel SE™
Stretcher Support Surfaces
Transforming the standard of stretcher support surfaces
Our cover story.
Bringing preventative cover features to the surface.

In line with our commitment to aiding in proactive prevention, we designed our surface covers with specialized features intended to make them more durable and effective for infection prevention.

- **Welded seams**
  Our covers feature RF welded seams that utilize electromagnetic bonding to limit fluid ingress and infiltration.

- **Durability**
  Our surface covers are engineered for ease of use, especially during the maintenance and care process. They’re made with a polycarbonate polyurethane material for increased chemical resistance.

- **Slip-resistant bottom**
  The bottoms of our surfaces feature a slip-resistant material to help improve infection prevention through the elimination of Velcro while maintaining affixation to the stretcher during patient movement and transfer.

- **Three-sided zipper**
  Caregivers can now fully inspect the condition of internal components of their stretcher surface with the SE Series’ three-sided zipper.
IsoFlex SE and ComfortGel SE stretcher support surfaces

Transforming the standard of stretcher support surfaces.

When we developed the SE Series of stretcher surfaces, we focused our design on aiding in proactive prevention.

Knowing pressure injuries can begin in as little as the first two hours of a patient’s stay, we strategically designed our surfaces with pressure redistribution in mind.

We outfitted our surfaces with new features offering pressure redistribution, improved infection control, and better all-around durability.

The series consists of two gel-based surfaces: IsoFlex SE and ComfortGel SE. This gives our customers the option of choosing the product that best fits their individual healthcare needs.

Looking at the overall attributes of the SE Series, it doesn’t take long to realize that our stretcher surfaces bring a combination of features that transform the standard of stretcher support surfaces.

IsoFlex SE Support Surface

Premium shear management

Stryker’s best-in-class stretcher surface, IsoFlex SE, addresses the key risk factors of skin breakdown: pressure and shear. In addition, IsoFlex enhances patient comfort and aids in the treatment and prevention of pressure injuries.

- Exclusive combination of ShearGel, CoreGel and foam technology
- Patented open-column design affords memory, flexibility and durability
- Foam crib and base helps with ingress and egress
- Slip-resistant bottom material eliminates the need for Velcro

Key Features

- Assists in the prevention of pressure injuries
- Durable polycarbonate polyurethane cover for increased chemical resistance
- Sloped heel section
- Welded seams limit fluid ingress and infiltration
- Three-sided zipper for internal component inspection
- Slip-resistant bottom eliminates need for Velcro
ComfortGel SE
Support Surface

Experience gel technology
ComfortGel SE was designed with the overall patient experience in mind and has specific features to help redistribute pressure and enhance patient comfort.

- Helps redistribute pressure via exclusive CoreGel Technology
- Gel technology affords memory, flexibility and durability
- Slip-resistant bottom material eliminates the need for Velcro

Feeling the pressure.
The truth about pressure injuries, by the numbers.

2.5 million
patients are diagnosed with pressure injuries every year.¹

2x
more likely for soft tissue breakdown when shear is present.³

70%
of pressure injuries develop in the body’s sacral region.⁴

$11 billion
The annual treatment costs for pressure injuries.⁵
Innovation. Inside and out.
The value of gel technology.

It’s true: Pressure injuries can begin in as little as the first two hours¹ of a patient’s admittance into a clinical setting. They pose a serious threat and should be treated as such.

With the aforementioned knowledge of the severity of pressure injuries in mind, we designed our stretcher surfaces with specific features to aid in treatment and prevention. Most important of the features is gel.

**ShearGel Technology**
Featuring only-in-class ShearGel, IsoFlex SE was designed to help minimize shear between the surface and the patient. Its technology offers a layer of support so IsoFlex can move freely with patient movements.

**CoreGel Technology**
Located in the sacral regions, CoreGel creates a positioning pocket to help prevent patient migration.² This design helps absorb and disperse patient weight to aid in pressure redistribution.

**Immersion**
The open column design of gel provides immersion, meaning gel can effectively absorb and redistribute patient weight for added protection and pressure injury prevention.

### Warranty

Stryker Medical, a division of Stryker Corporation ("Stryker"), warrants that its Model 1806 IsoFlex SE Support Surface Product and Model 1805 ComfortGel SE Support Surface Product will be free from defects in material and workmanship. Stryker’s warranty covers only the following items during normal use as follows:

- **Internal components**: three (3) years
- **Fire barrier**: one (1) year
- **Support surface cover**: one (1) year

### Customer support services

#### Technical Support

Stryker’s technical support comprises a team of professionals available to help with your SE Series’ needs. Contact via phone at 1 800 STRYKER or email at technicalsupport@stryker.com.
