TruRize™
Clinical Chair

Truth in mobility.

Early patient mobility

Long-term patient immobility can potentially have negative effects on a patient's recovery and overall health. TruRize helps to promote early patient mobility by supporting the patient to a standing position.

Stand Assist function supports patient to a standing position, helping to promote early patient mobility.

Patient safety

From its external design to the functionality of its features, TruRize has been carefully engineered with patient safety and comfort at its forefront. Being the industry-first¹ clinical chair with an integrated exit alarm system means that TruRize may help to shorten response time to patients.[†]

[†]Integrated chair exit alarm system that is IEC 60601-1-8 Medium Priority Alarm compliant.

Caregiver safety

Career-ending caregiver injuries can occur each year as a result of manual lifting, moving or shifting of patients. TruRize has been designed to help promote safe patient handling.

Full-flat transfer position is intended to aid in patient transfers with pivoting armrests to further aid in the process.

The next step in mobility.

Early patient mobility is a crucial component during the recovery process. Its importance to a patient's health and recovery cannot be emphasized enough.

With TruRize, Stryker has created a powered clinical chair that does more than acknowledge the value of early patient mobility. We've created a new way of thinking about mobility.

TruRize helps to promote early patient mobility. It gives caregivers the assurance they need to safely mobilize patients.

It's only a chair by definition: TruRize is the next step forward in patient mobility.

Key Features

- Simple, user-friendly technology helps to equip caregivers with the tools to help promote safe patient handling
- Powered-pivoting design guides the movement of TruRize into positions that help promote patient comfort
- An industry first¹ integrated chair exit alarm system may help shorten response time to patient falls*

Caregiver specific control panel is the first of its kind in the industry.¹ Easily accessible and easy to use, the control panel offers simplicity in a complex environment.

Pivoting armrests move to aid in patient transfer.

Integrated Foley bag hooks, located on both sides of TruRize, position drainage bags below the waist.

One-touch brakes, located on both sides of the chair, simultaneously lock all four dual-wheels.

Vertical handles are designed for optimal ergonomic maneuvering.

Lighted occupant control panel is an industry first. It allows patients to control their own comfort while limiting full chair mobility to the hands of the caregiver.¹

Height adjustable to accommodate a wide range of patients.

Six set positions

Allow operators to easily adjust TruRize into various positions with the simple push of a button.
