The next generation of stretcher support surfaces

When we developed the SE series of stretcher surfaces, we focused our innovative design on aiding in proactive prevention.

The Ultra Comfort SE Support Surface was designed with the overall patient experience in mind and has specific features to assist in improving outcomes.¹

Key Features

- Thermoplastic polyurethane (TPU) cover* engineered for ease of use and provides increased chemical resistance
- RF welded seams limit fluid ingress and infiltration
- Three-sided zipper allows for inspection of the condition of internal components
- 700 lb. weight capacity
- X-ray compatible

Compatible with our stretchers

The Ultra Comfort SE Support Surface’s design and thickness allows for compatibility with Stryker’s stretchers

Welded seams

Seams are a common problem area for infection. Our covers are sealed with a specific type of electromagnetic bonding utilizing RF welding to limit fluid ingress and infiltration.

Three-sided zipper

Caregivers can now fully inspect the condition of internal components of their stretcher surface with the new three-sided zipper.

Durability

The Ultra Comfort SE Support Surface’s cover is engineered for ease of use, especially during the maintenance and care process. It is made with a Thermoplastic Polyurethane (TPU) cover* for increased chemical resistance.
**Standard features**
- Thermoplastic polyurethane (TPU) cover*
- Welded seams
- Three-sided zipper
- 700 lb. weight capacity
- Compatible with Stryker's stretchers

**Optional features**
- Polycarbonate polyurethane (PCPU) cover
