# VSP® Reconstruction

## Virtual Surgical Planning

VSP Reconstruction is a digital planning solution for all your maxillofacial surgical needs.

Common VSP Reconstruction applications include planning for maxilla/mandible reconstruction using the fibula free-flap, facial trauma and distraction osteogenesis.

- Simulate cranio-maxillofacial procedures on your patient's CT/CBCT.
- Optimisation of surgeon defined osteotomies and bony movements prior to surgery.
- Transfer the virtual plan to surgery using patient specific osteotomy and positioning guides.

Part number	Description
VSPRECON	VSP Reconstruction mandibular/maxillary case bundle (metal inserts included)

\*Part number may vary based on case deliverables

**For information regarding CT scanning protocols please refer to the CT Scanning Protocol or your Stryker Sales Representative.**

A surgeon must always rely on his or her own professional clinical judgment when deciding whether to use a particular product when treating a particular patient. Stryker does not dispense medical advice and recommends that surgeons be trained in the use of any particular product before using it in surgery.

The information presented is intended to demonstrate the breadth of Stryker product offerings. A surgeon must always refer to the package insert, product label and/or instructions for use before using any Stryker product. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your Stryker representative if you have questions about the availability of Stryker products in your area.
