Course description

This training focuses on the complexities of **revision knee arthroplasty** procedures, providing in-depth knowledge and hands-on experience to address the challenges of managing failed primary implants. Participants will explore surgical techniques, advanced instrumentation, and strategies for joint line restoration, bone defect management, and implant stability. The course integrates theoretical insights with practical applications, enabling participants to refine their skills in revision procedures using **Stryker's Triathlon Revision Knee System**.

Course objectives

- **Master Revision Techniques:** Equip participants with the skills to address instability, bone loss, and joint line reconstruction in revision knee arthroplasty.
- **Optimize Implant Selection and Placement:** Emphasize the effective use of modular components, cones, and augments to achieve stable and durable outcomes.
- **Enhance Procedural Confidence:** Provide participants with hands-on cadaveric sessions to apply learned techniques and manage complex revision cases effectively.
- **Promote Best Practices:** Teach strategies to avoid complications, including infection management, soft-tissue balancing, and extensor mechanism repair.

Participant profile

- **Target Audience:** Orthopedic surgeons experienced in primary knee arthroplasty and looking to expand their expertise in revision knee procedures.
- **Experience Level:** Intermediate to advanced practitioners familiar with knee arthroplasty principles.
