

Hearts on Duty

Donate an AED

Hearts on Duty helps law enforcement pay it forward with every sudden cardiac arrest save.

Stryker is committed to saving lives and making public access automated external defibrillators (AEDs) more readily available in the workplace and community. The donation of a defibrillator through the Hearts on Duty program extends this lifesaving technology to even more people, offering many a better chance of survival in the event of sudden cardiac arrest.

How it works:

When a LIFEPAK® CR2 AED funded by the **Helmsley Charitable Trust** is used to save a life during a sudden cardiac arrest, the first responder donates an AED to an organization of their choice on the survivor's behalf.* Only AEDs purchased from Helmsley Charitable Trust funding are eligible.

Qualifying event:

Event must be a sudden cardiac arrest to qualify (event is reviewed by Stryker Clinical team, whose decision is final). Stryker must receive the original event file (.pco only; .pdf file will not be accepted) and Customer Event Report form. Patient must have survived until hospital admission. If you have a Hearts on Duty story, or know of someone who survived a sudden cardiac arrest due to the use of a LIFEPAK AED, contact us! Learn more about the program at: <https://www.strykeremergencycare.com/landing-pages/LPCR2-State-Project/>

*Donation of AED cannot be to themselves, another individual or any healthcare provider or medical professional. AED is provided by Stryker.

A trusted legacy

Working in partnership with our customers, Stryker develops technologies and devices to give the public, first responders and hospitals more control during a critical event. Our uncompromising commitment to quality means product performance you can count on. Because in critical situations, you deserve the very best lifesaving tools.

For a brief summary of important disclosure and safety information regarding LIFEPAK AEDs, please visit our website at strykeremergencycare.com/disclosure-and-safety-information/

Emergency Care Public Access

Stryker's AEDs require a prescription in the U.S. Please consult your physician. AED users should be trained in CPR and in the use of the AED.

Although not everyone can be saved, studies show that early defibrillation can dramatically improve survival rates. AEDs are indicated for use on adults and children. AEDs may be used on children weighing less than 25 kg (55 lbs) but some models require separate defibrillation electrodes.

The information presented is intended to demonstrate Stryker's product offerings. Refer to operating instructions for complete directions for use indications, contraindications, warnings, cautions, and potential adverse events, before using any of Stryker's products. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your representative if you have questions about the availability of Stryker's products in your area. Specifications subject to change without notice.
