LIFEPAK® 20e

defibrillator/monitor

Quick Reference for clinical use

Manual operation

Defibrillation

- 1. Press ON.*
- 2. Apply QUIK-COMBO® therapy electrodes or hard paddles with conductive gel.
- 3. Select ENERGY SELECT. Adjust up or down as needed.
- 4. Press CHARGE.
- 5. Stand clear.
- 6. Press **SHOCK 6** to deliver energy.
 - *To change from AED operation to manual operation press gray manual tab and open door or press **ENERGY SELECT**.

Synchronized cardioversion

- 1. Press ON.
- 2. Attach ECG cable and apply ECG electrodes.
- 3. Apply QUIK-COMBO therapy electrodes or hard paddles with conductive gel.
- 4. Select lead II or the lead with the greatest ORS complex amplitude.
- 5. Press **SYNC**. Confirm placement of triangle sense marker ▼ appears near the middle of each ORS complex.
- 6. Press ENERGY SELECT. Adjust up or down as needed.
- Press CHARGE.
- 8. Stand clear.
- 9. Press and hold **SHOCK 6** until energy is delivered.

Pacing operation

- 1. Press ON.
- Attach ECG cable and apply ECG electrodes (ensure adequate spacing between ECG and QUIK-COMBO electrodes).
- 3. Apply QUIK-COMBO therapy electrodes.
- 4. Press PACER.
- 5. Press RATE to adjust up or down as needed.
- 6. Press CURRENT and adjust up until electrical capture is achieved.
- 7. Confirm mechanical capture.
- 8. As needed, press **PAUSE** and hold to confirm underlying rhythm.

AED operation

Confirm therapy cable is not connected to test plug before pressing \mathbf{ON} button.

- 1. Press ON. Follow audio/visual instructions.
- 2. Press **ANALYZE** and stand clear.
- 3. Press **SHOCK @** when directed to deliver energy.

CPR Metronome

The CPR Metronome automatically provides audible compression "tocks" and ventilation prompts or tones during CPR.

AED mode: The Metronome turns on automatically if configured on. The default C:V ratio is Adult-no airway 30:2 because most patients in cardiac arrest are adults who have an initially unsecured airway.

Manual mode: To activate, select the CPR metronome icon using the SPEED DIAL.

Select the desired Age-Airway setting using the SPEED DIAL.

Adult—No Airway 30:2 (default)

Adult—Airway 10:1

Youth—No Airway 15:2

Youth—Airway 10:1

To stop the Metronome, select Stop Metronome in the CPR Metronome menu.

See device Operating Instructions for complete directions for use, indications, contraindications, warnings, precautions and potential adverse events.
