Remanufactured

LigaSure Exact Dissector,
Without Nano-Coating
(LF2019)

Increased precision,
decreased footprint

In-line testing

Multi-point inspections

Every device

For over a decade, Stryker's Sustainability Solutions has been the global leader in reprocessing of complex single-use surgical devices.

Throughout this time, we have reprocessed **over 889,000** LigaSure devices. LF2019 is the newest addition to our portfolio, and our twelfth LigaSure device. While the devices have evolved, our approach to quality remains the same.

Before being sent back to you, all reprocessed/remanufactured devices are required to pass through our robust process consisting of:

- Visual blade inspection
- Blade cutting performance inspection
- Electrical testing

20.6mm
seal length

21.6cm
jaw length

40 degree
curved jaw

Our Remanufactured LigaSure Exact Dissector, Without Nano-Coating is a bipolar electro-surgical instrument intended for use in open surgical procedures where ligation and division of vessels, tissue bundles, and lymphatics is desired.

Indicated for use in: General, Ear, Nose and Throat, Reconstructive, Plastic, Thoracic and Urology

Redesigned for **Sustainability™**

We further our mission to be responsible environmental stewards by limiting known negative environmental impacts that come with traditional manufacturing.

Without compromising performance or quality, we've enhanced environmental aspects of our device to deliver sustainable solutions to healthcare. Our Remanufactured LigaSure Exact Dissector, Without Nano-Coating has substantial environmental improvements in two key areas: packaging and manufacturing.

Packaging:

Our packaging weight has been reduced by 13% when compared to the OEM, which, over five years, will result in 1,900 lbs diverted from the landfill.

Manufacturing:

We've identified synergies in our cleaning lines to better optimize the use of water and necessary chemicals. These synergies will produce an 88% reduction in water usage, saving 72,000 gallons of water per year and a 92% reduction in chemical usage, saving 2,000 gallons of chemicals per year.

SSS has optimized the manufacturing processes to reduce material, labor and time required to effectively clean the device.

Going beyond reprocessing.
