SpineMap Go
augmented fluoroscopy

Provides live instrument visualization on biplanar images

Taking fluoroscopy to the next level
Results are in...

Here’s what your colleagues are saying about SpineMap Go¹

89.8% radiation reduction time during pedicle screw placement¹

"...instead of taking a shot every time you place a device, you only have to take two shots at the beginning of the case."
O.R. Nurse

No increase in operative time during pedicle screw placement¹

“There is less risk to me and the other staff in the O.R.”
O.R. Nurse

"SpineMap Go gave us live navigation capabilities without disruption to our workflow or bottom line."
Ortho Spine Surgeon

“Because familiar 2D is at the core, it was a painless transition and is simple to use.”
O.R. Nurse

“Augmented Fluoroscopy with SpineMap Go seemed to streamline and simplify the entire case.”
Neuro Spine Surgeon
**Experience**
is everything

Get the best of both worlds. Using just one C-arm, SpineMap Go for image-guided spinal surgery combines the traditional fluoroscopic views you trust with live, navigated instrumentation. Think of it as your “happy medium” – the noninvasive patient tracking you want without a 3D imaging device or significant change to workflow. Just capture initial registration, remove the C-arm and proceed freely without bulky equipment in your way. By arming you with live tool tracking and C-arm guidance, SpineMap Go also helps you reduce localization shots and associated radiation exposure. With these advantages, SpineMap Go aims to enhance precision and outcomes while giving you a smoother, more pleasant surgical experience.

**Familiar fluoroscopic views**
- Adds simultaneously live instrument tracking onto your AP and lateral images using just one C-arm
- Instrumentation and familiar imagery make it simple to adopt and use
- Easily lighten, rotate, zoom or change image contrast via intuitive touch screen tablet

**Better surgical experience**
- Simplicity that works with you; gain benefits of advanced guidance without significant fluoroscopy workflow changes
- Improves ergonomics and comfort; minimizes equipment constraints by reducing need for lead garments and table elevation to accommodate C-arm
- Increases procedural momentum due to less C-arm handling and re-imaging
- Help enhance precision to foster better clinical outcomes

**Simple workflow**
- Requires only one C-arm
- Capture initial AP and lateral registrations – or any desired image up front – then remove C-arm to work unobstructed
- Image browser can automatically save all fluoroscopy images and registrations; labeled and marked any/all images for quick, efficient recall
- Automatic registration and instant re-registration if accuracy is ever compromised
- Reduces fluoroscopic imaging, C-arm repositioning and working around bulky imaging equipment
- Utilizes standard C-arm display
- Enables enhanced communication between surgeon and radiologist due to C-arm guidance data

**Significantly reduced screw misplacement rates**
- Reduced radiation by 427 mGy
- Reduced radiation time nearly 2 minutes
- Reduced dose by 89.9%

**Proven radiation reduction**
- Designed to reduce radiographic imaging associated with health dangers
- 98.6% reduction in radiation time without increasing operative time during pedicle screw placement
- No pre-op CT required
- Live biplanar navigation in as few as two fluoroscopy shots
- Single-shot instant re-registration
- C-arm guidance displays proper C-arm repositioning to set areas without reliance on localization shots

**Cost effective**
- Economical integration with most common C-arms; no 3D imaging device needed
- Provide select advantages of a 3D system without the cost or learning curve
- Simple, cost-effective way to keep pace with advanced technology
- Bespoke resources: second C-arm can be redeployed
- Compatible with third-party navigated spine instruments

**Within the first decade**
surgeons can surpass their recommended lifetime limit for whole-body radiation

**C-arm based CAS**
spinal surgery

**Significantly reduced screw misplacement rates**
- Reduced radiation by 427 mGy
- Reduced radiation time nearly 2 minutes
- Reduced dose by 89.9%

**Better surgical experience**
- Simplicity that works with you; gain benefits of advanced guidance without significant fluoroscopy workflow changes
- Improves ergonomics and comfort; minimizes equipment constraints by reducing need for lead garments and table elevation to accommodate C-arm
- Increases procedural momentum due to less C-arm handling and re-imaging
- Help enhance precision to foster better clinical outcomes
