Graft Shaping Made Easy

The goal: Prepare the tibia, shape the allograft, secure the bone block.

The means: Stryker Slot Instruments.

This all-inclusive set is designed to combine reproducible results with a straight-forward technique.

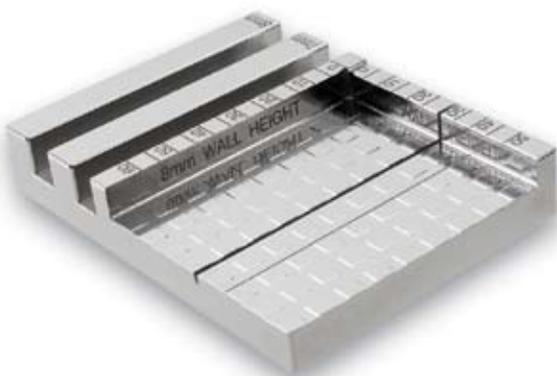

Robust Mechanisms

Depth gauge and drill guide allow for accurate, easy to read measurements of the tibia. Once calibrated, hard stops on all drilling steps help to preserve back-wall integrity.

Surgeon Control

Box cutter and rasp hand-tools offer surgeons greater control and flexibility during slot preparation than other techniques.

Graft Shaping Made Easier

Multi-function sizing block helps to reduce graft preparation time.

The graft sizing walls and channels are designed to allow the surgeon to determine the desired graft fit prior to insertion into the joint.
